北美SAS (香港考場) SBA 質素機經 02.01.2016(ddmmyyyy) by mikeleung110

請留意,這並不是最強的機經,我想說這個世界永遠沒有最強的,只有更好更高質素的機經,我在此希望所 有享用及讀過這機經的朋友,希望你們參考之時能再把我這個機經不斷不斷的改善加強,我更加想將這些機 經和LEGENDS發揚光大,把分享機經的精神宣揚出去,使得日後使用的朋友在學習上更加事半功倍!

内容主要有三大部分:

Contents	
1.參題機經	2
2.新題庫	
3. 65題主要詳解 by mikeleung110 (請先看Main Notes Legends)	12

Legends:

FIB=FILL IN THE BLANKS=填空題 CBSC=CHANGED BUT SAME CONCEPT=題目有變但概念大致相同 CBSA=CHANGED BUT SAME ANSWER=題目有變但相同的答案 CH=CHANGED=題目有變 MDI=MIND THE DISTRUBED ITEMS=小心干擾的項目 ANS=正確答案

Small Legends for SBA

DS=Data Set TR=Training Data Set TE=Testing Data Set V=Validation Data Set MV=Missing Value

Main Notes Legends

- Prob=Probability
- 2. CO=Cut Off
- 3. **ROC=Receiver Operating Curve**
- 4. DS=Data Set
- 5. TR=Training Data Set
- TE=Testing Data Set 6.
- 7. V=Validation Data Set
- 8. MV=Missing Value
- 9. SEN=Sensitivity
- 10. Spec=Specificity
- 11. Rep=Replacement
- 12. RD=Random Draw
- 13. PV+/- =Positive/Negative Predicted Value
- 14. T+/- = True Positive/Negative
- 15. TOA+/- = Total Actual Positive/Negative
- TOP+/- = Total Predicted Positive/Negative
- 17. PC/AC= Predicted Class/Actual Class
- 18. HA=Honest Assessment
 19. QCS=Quasi-Complete Separation
 20. IV=input variables
 21. L=Lift
 22. d=depth

- 23. NSD=Not significant Different
- 24. S=Spearman; P=Pearson

1. 變題機經

	變題機經(02.01.2016,ddmmyyyy) (prepared by mikeleung110)				
	Details (updated on 02.01.2016, ddmmyyyy<<如要参考使用表格內容或作更改的話,請你標註日期的月				
Q	份/日子排序,因為國內常	常用 mmddyyyy 跟香港的	ddmmyyyy 不一樣,很混	亂,日期的標註真的很重	
	要)				
	以下是在 65 題出到的內容		示一樣的內容沒有變,注意	於客的選項位置可能有變	
	化,以下我都盡量精簡說	」明得非常非常清楚。(讓你	尔們見識一下何謂質素機經	至,沒有最強的機經,只有	
	更好更高質素的機經!(都	昏港是說質素,反之國內 是	是說素質,真的是給你們玩	元了))	
3					
4					
5					
6					
7					
	雖沒有考但仍說 SOL:				
8	因為在第二個程序中輸入	、的 SUB-DATASET 僅僅何	包含了 TG =1 的情况(即 E'	VENT 實際發生的部分)。	
0	求出的均值相當於 Sensiti	ivity.			
	ANS: Sensitivity				
	CH: 舊題「A」變「B」				
	OLD:「A圖是曲線;TR=	=90.5%;V=75.5%,B 圖岩	是直線;TR=83%;V=78.3	3% 」	
9	NEW:「A 圖是直線;TR=83%;V=78.3%,B 圖是曲線;TR=90.5%;V=75.5%」				
	SOL: 比較模型時,主要	看 V 的 ACCURACY。單	看 TR 不夠,會出現 Over	fitting.	
	ANS(NEW): Model A. It is	s simpler with higher accura	acy than model ${f B}$ on validat	ion data.	
	UNCH: 注意 200 為 PRO	FIT,而不是 REVENUE			
	SOL:	1			
			Solicit		
10			0	1	
	Purch		0	-10	
		1	0	200	
	ANS: Profit=(P_R>0.05)*I	Purch*200+(-10)*(1-purch)	*(P_R>0.05)		
	雖沒有考但仍說 SOL:				
	HA(Honest Assessment)一定有 TR 和 V,TE 可以沒有				
11	Summary:				
11	V= To compare models and	d select and fine-tune the fir	nal model		
	TE=To provide an unbiased measure of assessment for the final model				
	TR= To build the predictive	e model			
12	雖沒有考但仍說 SOL:				
12	ROC下的面積愈大,模型	型愈好。			
13	CH: 舊題「500 PROFIT」	」變「500 REVENUE」			

Profit=Revenue-Cost=500-50=450

UNCH & ANS: Sensitivity & specificity are not affected by oversampling

14 SOL from books: Sensitivity and specificity, however, are not affected by separate sampling because they don't depend on the proportion of each class in the sample.

CH:舊題「deployed has 5% event; nine times 」變「deployed has 10% event; **nineteen** times 」 SOL:

Priorevent=the probability of event in population=0.10

P_1 範圍從此求出:

			Solicit	
			0	1
15	Respond	0	0	-1
		1	0	19

19p+(1-p)(-1)>0

20p > 1

p > 0.05

ANS:X=0.10 Y=0.05

UNCH

另外加了一條問 TR 和 V 的用處(注意 TR 和 TE 並不一樣,我考的時候背答案太快混淆了)

CAUTION: TE 是個別問的;而 TR 和 V 是兩者一起問的。

ANS: V is used to compare models and select and fine-tune the final model while TR is used to build the predictive model

16 MDI: V is used to compare models and select and fine-tune the final model while TR is to provide an unbiased measure of assessment for the final model.

Summary:

V= To compare models and select and fine-tune the final model

TE=To provide an unbiased measure of assessment for the final model

TR= To build the predictive model

UNCH:

SOL: SEN=T+/TOA+=25/(23+25)=25/28

另外加了一題同時同 Accuracy & Error Rate

17 ANS: Accuracy=83/150; Error Rate=67/150

Accuracy=((T-)+(T+))/(Total Cases)

Error Rate=((F-)+(F+))/(Total Cases)

Legends & formula 的詳情在這裡不詳細說了,看我附件的簡單記法。

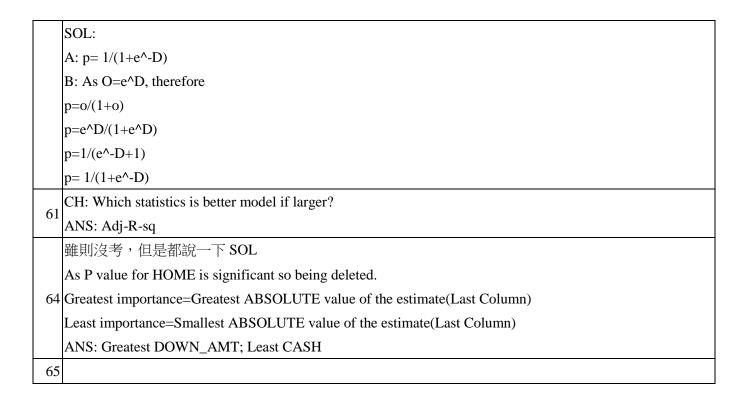

20

CH:變 FIB(填空)

FIB:hovtest

	CH:多了個 MDI:XL and 2XL are only the groups are significantly different from all groups
22	CBSA: Only XL and 2XL are not significantly different from each other.(真的要仔細地看清楚答案的每一
22	個字眼,因為試題不僅捉 GRAMMAR 還會將句子重組,雖則這題沒有句子重組,畢竟真的要看清楚
	字眼,不然只懂背一個答案的話看了 MDI 還是會選錯的,有時候真的大意錯在這裡。)
22	CH:舊題「MODEL 15716」變「MODEL 7266」
23	ANS: SSR/SST=7266/20761=35%
	CH: Given GLM 產生的圖,找明顯的 ASSUMPTION VIOLATION
24	SOL: Histogram 不是正態分佈;QQ PLOT 不是斜對角線
	ANS: Normality violates
	CH:改變圖片:右邊的竪綫在陰影外面
	ANS: Medium wrist size is significantly different than small wrist size.
	SOL:
25	1) Control=S 就是說用 Small size 和其他組(Medium, Large) 比較,Small 為 REF 組
	2) 陰影部分
	若竪綫在陰影部分之內,說明 NSD (not significantly different)
	若竪綫在陰影部分之外,說明 SD
	UNCH: 注意 TTEST 跟 VAR
26	CLASS specifies classification variables for analysis.
	MODEL specifies dependent & independent variables for analysis.
28	CH: 舊「MV(Missing value)」變「Redundant」
20	ANS: Varclus
29	
30	
31	
32	
33	CH:舊「Including」變「Excluding/Eliminating」
33	ANS: Stabilize parameter estimate and decrease the risk of overfitting.
35	CH: Given plots, ask for remedial solution(改善方法)
33	ANS: add a log transformed variable x to the existing model
	CH:舊「Pearson」變「Spearman」
	ANS: OUTS=
36	OUTH=Specifies the output DS with Hoeffding's Statistics
30	OUTK=Specifies the output DS with Kendall correlation statistics
	OUTP=Specifies the output DS with Pearson correlation statistics
	LOTTERS OF 18 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1
	OUTS=Specifies the output DS with Spearman correlation statistics
30	CH:舊「is added」變「is excluded」
39	

	For which are 20 images				
	For which age=30, income=unknown ANS: unpredictable/cannot calculated 的字眼因為是 MV				
	CH:變 FIB				
41	FIB:0.4115(4 d.p.)				
71	R-sq=SSR/SST=33033/8	0265=0 4115			
42	10 sq-5510 551 - 5505570	0203-0.4113			
	CH: Ask for total observa	ntion for DS (n)			
	SOL:				
		DF	SS	MS	
43	Regression/Model	K	SSR	MSR=SSR/k	
	Error	n-k-1	SSE	MSE=SSE/(n-k-1)	
	Total	n-1	SST		
	ANS: n-1=99>>>n=100	- 1	-	,	
44					
45					
46					
	CH:舊「AIC」變「SBC				
47	SOL:跟 AIC 一樣都是愈	知愈好: smaller SI	BC value are preferable;Lo	ower AIC values indicates more	
47	desirable model.				
	ANS: 選 SBC VALUE=63 裡的 VAR				
48	3				
49				和 CLASS 後只有一個 VAR	
50	CH:舊「Collinearity」變「influential factor」				
	ANS: cooksd				
-	UNCH: 只多了「Salary				
-	UNCH: 注意 Return 則	曾得到一個新模型			
53					
54					
55					
56		∑ Discordant			
57	CH:舊「Concordant」變「Discordant」 ANS: An observation with the event has lower predicted probability than the observation without the event.			an the observation without the event.	
	UNCH				
	SOL:				
58	1-Spec= F+ =did not & ir	ncorrectly classified	=25%		
	SEN= T+ =did & correct	ly classified=85%(初	從 25%的 1-Spec 看 85%的	勺 SEN)	
59					
60	UNCH				

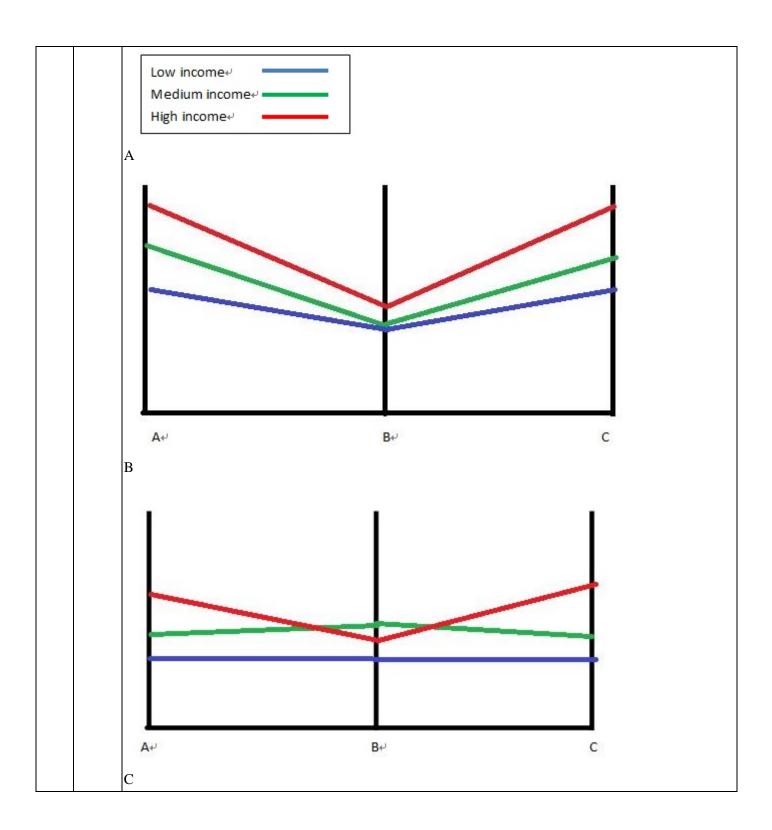

2. 新題庫

		新題庫 updated on 02.01.2016(ddmmyyyy) (prepared by mikeleung110)				
		Details (updated by 02.01.2016, ddmmyyyy<<如要參考使用表格內容或作更改的話,請你標註日				
Q	Real Q	期的月份/日子排序,因為國內常用 mmddyyyy 跟香港的 ddmmyyyy 不一樣,很混亂,日期的標				
		註真的很重要);REAL Q 是真正考試的排序次序				
		(讓你們見識一下何謂質素機經,沒有最強的機經,只有更好更高質素的機經!(香港是說質素				
		反之國內是說素質,真的是給你們玩了))				
		Given a eqt				
1	4	Logit(p)=0.005income+0.004 age+				
1		For which age=30, income=unknown				
		ANS: 類似 cannot calculated 的字眼,記不清楚了				
		There is N observation data, k parameter variables, and a categorical variable with 20 levels.				
		How many additional parameters variables are added to the model?				
		A 20				
2	7	B 19				
		C N-1				
		D k+20				
		ANS:A(Not Sure)				
3	9	Given a logits plots, ask the remedial solution				
		ANS: add a log transformed variable x to the existing model				
		What is the relationship with the correlation of the coefficient of pearson between variables? (類似問這				
		些,主是問 PEARSON CORREALTION)				
		A linear & monotonic correlation between variables				
4	11	B non-linear & monotonic correlation between variables				
		C linear & non-monotonic correlation between variables				
		D non-linear & non-monotonic correlation between variables				
		ANS:A(should be)				
		Which is the improper use of LOGISTIC proc?				
		A ranked of likelihood of the default of the loan				
		B predict WHEN customers to buy a house within one-six month				
5	12	C predict WHICH customer to use the internet to buy a house within six month				
		D predict WHICH customer to refinance the mortgage within one month				
		因為印象中 LOGISTIC 老是在 RANK 什麼和排序東西的,所以 RANK, WHICH*2 相同的我都排				
		除了,剩下的就是 WHEN 是最另類的了。選 B(不確定)				
		Given variables				
6	17	Gender(F,M)				
6	1,	INCOME(Low, Medium, High)				
		Age				

It is required to use High income to compare with the two income level, and also take account with age and gender Which code is used? Class Gender("F") Income("high")/param=ref Model=Gender income age В Class Gender Income Model=Gender income age Model=Gender income age D Class Gender Income/param=ref Model=Gender income age 前人的機經只是提到了選有 param=, ref= ,這裡有兩個選,前人就他媽的沒有提到其他了,我想 因為題目問用 HIGH COMPARED WITH TWO INCOME,所以選了 A (不確定) NOTES: PARAM=option in CLASS statement specifies the parameterization method for classification variables REF=option specifies the ref lv Given a gain chart, What is the use of the reference line(red)? PV+↔ 37 0.01↔ Depth⊌ A prior event rate B False Positive of probability C False Negative of probability

ANS: A(Not Sure) Given one final output, and one ANOVA with 3 variables for 3 p-values, which is correct? TABLE 1: Final output 的 variable "size" p-value=0.192 (這個數是一定的) TABLE2: 3-p-values tables: P-value Intercept 0.004(不確定這數是否在這一列) Size S 0.380(不確定這數是否在這一列) Size M 0.192(不確定這數是否在這一列) Size L xxxx(不確定達數是否在這一列) A Significant difference between variable "M" & "S" as P=0.004 B Effect is not significant for "size" due to the effect as P=0.380 C Effect is significant for "size" due to the effect as P=0.380 C Effect is significant for "size" due to the effect as P=0.380 C Effect is significant for "size" due to the effect as P=0.380 R			D proportional cases which cannot be classified
TABLE 1: Final output 的 variable "size" p-value=0.192 (達個數是一定的) TABLE2: 3-p-values tables:			ANS: A(Not Sure)
TABLE2: 3-p-values tables:			Given one final output, and one ANOVA with 3 variables for 3 p-values, which is correct?
P-value Intercept			TABLE 1: Final output 的 variable "size" p-value=0.192 (這個數是一定的)

的,正確是選 A SAMP 是沒有括號的和要有 OUTALL ANS:A -Q22 變題 A Only XL and 2XL are not significantly different from each other. B XL and 2XL are only the groups are significantly different from all groups ANS:A Interaction between webpage(A,B,C) and income(L,M,H) An analyst claimed that there is a great interaction between variable webpage with HIGH income, so	10	32	D proc surveyselect data=frame out=sample sampsize=(800);
ANS:A -Q22 變題 A Only XL and 2XL are not significantly different from each other. B XL and 2XL are only the groups are significantly different from all groups ANS:A Interaction between webpage(A,B,C) and income(L,M,H) An analyst claimed that there is a great interaction between variable webpage with HIGH income, so			這一條他媽的原來前人的機經有提到但我忘記了掙扎了該有 OUTALL 還是沒有,選了 C 是錯
A Only XL and 2XL are not significantly different from each other. B XL and 2XL are only the groups are significantly different from all groups ANS:A Interaction between webpage(A,B,C) and income(L,M,H) An analyst claimed that there is a great interaction between variable webpage with HIGH income, so			的,正確是選 A SAMP 是沒有括號的和要有 OUTALL
A Only XL and 2XL are not significantly different from each other. B XL and 2XL are only the groups are significantly different from all groups ANS:A Interaction between webpage(A,B,C) and income(L,M,H) An analyst claimed that there is a great interaction between variable webpage with HIGH income, so			ANS:A
B XL and 2XL are only the groups are significantly different from all groups ANS:A Interaction between webpage(A,B,C) and income(L,M,H) An analyst claimed that there is a great interaction between variable webpage with HIGH income, so			~Q22 變題
B XL and 2XL are only the groups are significantly different from all groups ANS:A Interaction between webpage(A,B,C) and income(L,M,H) An analyst claimed that there is a great interaction between variable webpage with HIGH income, so		50	A Only XL and 2XL are not significantly different from each other.
Interaction between webpage(A,B,C) and income(L,M,H) 12 60 An analyst claimed that there is a great interaction between variable webpage with HIGH income, so	11	53	B XL and 2XL are only the groups are significantly different from all groups
An analyst claimed that there is a great interaction between variable webpage with HIGH income, so			ANS:A
			Interaction between webpage(A,B,C) and income(L,M,H)
	12	60	An analyst claimed that there is a great interaction between variable webpage with HIGH income, so

	A+ B+ C
	D 忘記了
	D \\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\
	ANS: B(Not Sure)
13	Large different between performance on TR & TE usually indicates overfitting
	Accuracy=((T-)+(T+))/(Total Cases)
14	Error Rate= $((F-)+(F+))/(Total Cases)$
	Two items are asked in the same question.
	VIF>10 presence of strong collinearity in the model
15	VIF<10 not a problem of collinearity in the model
	題中 VIF 顯示 FULL NAME=Variance Inflation Factor
	Which two follow Hierarchy principle=single?
	A Model= Region Campaign
	B Model= Region*Campaign
16	C Model= Region Region*Campaign
	D Model= Region Campaign Region*Campaign
	ANS:A,C
	Notes:
	Hierarchy=single indicates only 1 effect can enter or leave the model at one time.

3. 65題主要詳解 by mikeleung110 (請先看Main Notes Legends)

		65 題主要詳解 update	ed on 02.01.2016(ddmr	nyyyy) (prepared by n	nikeleung110)	
Q	Bk Pages	Book Pages LP=Logistic Book; AP=ANOVA Book; Details:				
		As more along the curv	e, prob CO changes,			
1	LP172(4-34)	CO increase, increases	Cases allowed to Class	1(Class 0 if CO decrease	es), SEN increase, spec	
		decrease. (ALL vice ver	rsa, 即 decrease 所有勇	東西的符號都調轉)		
2	LP144(4-6)	HA: Split Data into TR	+V, V will be used for a	ssessment, results of the	e analysis on TR need to	
	LF 144(4-0)	be applied to V, not rec	alculated.			
3	LP176(4-38)	OUTROC=option creat	es an output DS with SI	EN(_SENSIT_) and one	minus	
3	LI 170(4-36)	spec(_1MSPEC_) calculated for full range of CO prob				
4						
	LP145(4-7);	SMPRATE=option spec	cifies what portion of de	evelop DS should be sele	ected.	
5	LP264(A-36)	OUTALL=used to return	n the initial DS augmen	ated by a flag to indicate	ed selection in the	
	LI 204(A-30)	sample.

18	V 最重要(記法:V=	VICTORY)		
19				

20		An interaction occurs when change ly of one factor result in change different between lys of
20		other factors.
21		
22		
23		ANS: SSR/SST=15716/20761=76%
24		
		1) Control=S 就是說用 Small size 和其他組(Medium, Large) 比較,Small 為 REF 組
25		2) 陰影部分
25		若竪綫在陰影部分之內,說明 NSD (not significantly different)
		若竪綫在陰影部分之外,說明 SD
		注意 TTEST 跟 VAR
26		CLASS specifies classification variables for analysis.
		MODEL specifies dependent & independent variables for analysis.
27		看答案已解
		P84(3-28)
		VARCLUS: eliminate redundant dimensions which related to principal components analysis.
		P166(4-28)
		STDIZE:
20		1) Output a DS than contains the relevant info about the imputed values for every input
28		2) Impute TR in V
		P146(4-8)~Q32
		CLUSTER
		1) Perform Greenacre's Corr. Analysis
		2) Group those lvs together P245 (A-17)
		A useful plot to detect non-linear relationship is plot of empirical logits
29	LP107(3-51)	
29	LF 107(3-31)	Scatter Plot: In regression analysis, standard practice to examine scatter plots of target verus
		each input variable)
30		
31		QCS affects the convergence of estimation algorithm.
		If there are nominal input variables with numerous lv,
32	LP134(3-78)	Lvs should be collapsed to reduce likelihood of QCS & reduce redundancy among lv (use
		clustering)
33		
		QCS occurs when lv of categorical input has a target event rate of 0% or 100%.
34	I D70(2 14)	If QCS occurs,
34	LP70(3-14)	1) One of logits-→infinite
		2) LV estimate of that coefficient-→infinite

	2) Affect converges of estimate already
25	3) Affect convergence of estimate algorithm
35	Logistic reg 是和 Log-odds 有關的 and continuous
	Found from Google & SAS(書是找不到的)
	OUTH=Specifies the output DS with Hoeffding's Statistics
36	OUTK=Specifies the output DS with Kendall correlation statistics
	OUTP=Specifies the output DS with Pearson correlation statistics
	OUTS=Specifies the output DS with Spearman correlation statistics
37	
	Spearman(S) vs Pearson(P)
	S=use ranks of data (記法:Spear=矛,用一枝矛刺穿所有已排好的東西吧)
	S=computed on ranks→depicts monotonic relationships
38	P=use observed values when variables is numeric (一個 RANK 一個 NUM,同時記了兩個,
	記了 S=RANK,剩下的推理都知道是 P=NUM 吧)
	P=on true values → depicts linear relationships
	S can be interpreted as P correlation between ranks on Variable X and ranks on variable Y.
39	Addition of predicted variables= increase R-sq
	Error~i.i.d. N(0, constant variance)
40	(i.e. Error is independent and identically disturbed with normal distribution of 0 mean &
	constant variance,夠清楚了吧?)
41	R-sq=1-(SSE/SST)=SSR/SST=33033/80265=0.4115
42	
12	The adjusted R^2 is the R^2 that is adjusted for the number of parameters in the model or it
43	takes account the number of terms in the model
	SLENTRY=specifies the significant lv for entry in model used in FORWARD and
	STEPWISE
	SLSTAY= specifies the significant ly for staying in model used in BACKWARD and
	STEPWISE.
44	SLS should be in the range of (0,1)
45	Default values:
	FORWARD=0.5
	BACKWARD=0.1
	STEPWISE=0.15
	If $Y=b0+b1X1++bnXn$
46	$X1=X2=Xn=0- \rightarrow Y=b0$ for which b0=intercept
	P129(3-73)
	Smaller SBC values are preferable.
47	P312(5-35)
	Lower values of AIC indicates more desirable model.
	25 TO THE INSTRUCTION IN THE INS

		Exclude y
48		$X1, X12 \rightarrow 2$
		$3 \text{ lvs} \rightarrow 3$
		Interaction terms→1
		Intercept b0→1
40		No. of parameters= 2+3+1+1=7
49		注意 REG 是沒有/SOLUTION; GLM 是有/SOLUTION 跟的和 CLASS 後只有一個 VAR
		PROC REG use VIF, COLLIN, COLLINOINT to assess the magnitude of collinearity problem
	LP268(4-48)	Other notes:
		Collinearity Problems
		1) Variance of coefficient increase, results in decrease precise estimation of parameters and
		predicted values
		2) But no a violation of assumption
50		3) R-sq, F→Significantly Large
		4) P-value of more than 2 variables are statistically significant (Large)
		Collinearity Diagnostics
		VIF: measure of magnitude of collinearity
		COLLIN: include intercept vector when analyzing X'X matrix
		COLLINOINT: exclude intercept vector when analyzing X'X matrix
		VIF>10 presence of strong collinearity in the model
		VIF<10 not a problem of collinearity in the model
51		
52		注意 Return 則會得到一個新模型
53		
54		
55		
56		Reference ly =intercept
57		
		1-Spec= F+ =did not & incorrectly classified=25%
58		SEN= T+ =did & correctly classified=85%(從 25%的 1-Spec 看 85%的 SEN)
59		Correction for oversampling is simply an adjustment to intercept.
		A: p= 1/(1+e^-D)→ 這是鐵定的
		B: As O=e^D, therefore
60		p=o/(1+o)
		$p=e^{D}/(1+e^{D})$
		$p=1/(e^{-D+1})$
		$p = 1/(1 + e^{-D})$
61		
O1		

62	
63	
64	As P value for HOME is significant so being deleted.
	Greatest importance=Greatest ABSOLUTE value of the estimate(Last Column)
	Least importance=Smallest ABSOLUTE value of the estimate(Last Column)
65
